

AGRICULTURE AND SUSTAINABILITY

TDHI

We are the Division within the TDHI Group that deals with the agricultural sector and the sustainability sector.

Sustainability is managing resources to meet current needs without putting future needs at risk. This takes into account social and economic development and environmental protection within the framework of governance. Firstly, sustainability presupposes that nature and the environment are not inexhaustible resources, so they must be protected and used rationally.

Secondly, sustainable development is about promoting social development and finding a combination of community and culture. As such, it seeks to achieve a satisfactory level of quality of life, health and education. Thirdly, sustainability drives economic growth and creates fair wealth for all, without damaging the environment. We study and apply sustainable projects for the TDHI Group and for our customers. If you are interested in having your company evaluated, so as to create a sustainable project, do not hesitate to write to us.

In the agricultural sector, we provide our support for TDHI Group customers' projects, for example: commercial development of agricultural processing machines or tractors, development of reforestation projects, agricultural improvement of production, recycling and recovery of water, etc.

■

As for all companies, projects, services and divisions of THDI Group, write to us what you are looking for or your needs. The TDHI HUB Division will make a first analysis, and will send it to our General Manager Dr Magri and to you in copy.
